The GREENS-MATE™ is the latest innovation in Greens keeping technology!

Now the grounds crew of your course will spend less time on their knees, fixing divots, and more time keeping up other areas of maintenance.

The GREENS-MATE™ is used to dispense a metered amount of colored mix to any ball mark, imperfection or divot on the green, tee box area or fairway.

Research shows some of the new varieties of Golf Course Turf are becoming denser. This causes ball marks and imperfections to be much more visible. The small amount of green dyed sand mixture helps the mark heal much quicker, gives a smoother ball roll and gives the turf a much better appearance.

GREENS-MATE™ Benefits:

- ⌘ Quickly and easily repair ball marks without bending over.
- ⌘ Instantly create a smooth surface for a superior ball roll.
- ⌘ Ball marks heal faster with less effort and fewer man hours.
- ⌘ GREENS-MATE™ nozzle does not touch the turf, so it will not get clogged by morning dew.

Perfect for your Starters and Rangers on their down time!
